In his new book, *Winter Is Coming*, chess grandmaster and AI expert Garry Kasparov argues that we are on the cusp of a new era in artificial intelligence, one that could have profound implications for humanity.

Kasparov, who was once the world's top-ranked chess player, warns that AI is advancing at an unprecedented rate and that we need to be prepared for the challenges it will bring.

Kasparov is no stranger to AI. In 1997, he famously lost a match to the IBM computer Deep Blue, becoming the first world champion to be defeated by a machine. But Kasparov has since become a leading advocate for AI,

arguing that it has the potential to solve some of the world's most pressing problems, such as climate change and poverty.

However, Kasparov also warns that AI poses a number of risks to humanity. He argues that AI could lead to job losses, inequality, and even war. He also worries that AI could be used to create autonomous weapons that could kill without human intervention.

Kasparov believes that we need to take steps now to prepare for the future of AI. He calls for governments to invest in AI research and regulation, and for individuals to educate themselves about AI and its potential implications.

Winter Is Coming is a timely and thought-provoking book that offers a unique perspective on the future of AI. Kasparov's insights are both fascinating and chilling, and they should be required reading for anyone who is interested in the future of technology.
